Technical details & performance overview

The advantages of mobile camera control are numerous. Not least of all, the fact that the entire image and video control system is usually ready for use within just 10 minutes is a compelling feature.
Learn more technical details about rent4event's comprehensive range of mobile HD camera control services here.

Up to four camera units (Sony HXC / HSC-100) are possible and can be controlled via the built-in RCP-1500. The cabling for red/green tally and intercom is already internally installed. The right-hand work area is reserved for the video technician and includes, among other features, a 32" Class A reference monitor and a measurement station with a vectorscope and waveform.

The Apple Mac mini i5 is equipped with Wirecast for live streaming events, among other features. It can also be used as a presentation computer, including Microsoft PowerPoint and Keynote, and serves as a configuration interface for the built-in hardware:

- Ultrastudio 4K
- Barco ImagePro HD
- Router (40 x 40 SD / HD / 3G-SDI)
- Timecode and Clock Generator
- 16x SD / HD / 3G-SDI Multiview

The left area is dedicated to video mixing and is equipped with a Panasonic AV-HS450 video mixer, a 28" multiview display, a 32" Class A reference monitor, a Riedel intercom system, and monitoring speakers.
Recording is performed on the built-in AJA KiPro, and audio distribution is handled via an 8-channel audio mixer.
In the event of an unexpected power outage, the 1500 VA Smart UPS ensures continued operation for up to 7 minutes, even at full load.

The wiring of the inputs and outputs is conveniently done via separate connector panels on the open back of the control case:

- Timecode
- Blackburst / TriLevel Sync
- SDI In- / Outputs
- DVI In- / Outputs
- Audio analog / digital In- / Outputs
- Intercom
- Ethernet

If you have any further questions, we are happy to help! Changes in configuration may apply.
