Lectern MK46

with integrated 46" front display

Just as the topics of lectures, discussions, and other public events vary, so too do the demands on a lectern's design. Is it more classic or modern, understated or striking? And which color best suits the stage setting, the company, and the speaker?

To meet these requirements, we designed our rent4event lectern with an integrated 46" display. Compact and convenient, the MK46 lectern can be transported in its lockable flight case and set up in just a few minutes. No assembly required. We opted for simple forms in the design. This way, the content of the LCD display determines 99% of the overall effect of the lectern. This allows for maximum flexibility, spontaneity, and creative freedom.

Present any content on the display. And (with appropriate optional configuration) this content can also change as desired during the event. For example, to display the names and roles of speakers or to emphasize the lighting mood in the room.

With two optional gooseneck microphones that simply plug into the tabletop's jacks, the acoustics leave nothing to be desired – assuming, of course, that a suitable sound system is available on-site. You can also find sound reinforcement equipment [here](#).
